

MATTHEW CHANG

Stouffville, Ontario | 647-200-7444 | matthewchang222@gmail.com | linkedin.com/in/mc-2chang | github.com/M2Chang

TECHNICAL SKILLS

Analytics Stack : dbt, Airflow, Redshift, BigQuery, Looker, PowerBI, Tableau, Segment

Languages : SQL, Python, Bash, PL/SQL, T-SQL, R

Cloud & DevOps : AWS (Lambda, Step Functions, S3), GCP, GitHub, dbt Cloud, Autosys, Docker

Data Modeling & Warehousing : Data Marts, Snowflake, Databricks, PostgreSQL

BI & Visualization : LookML, Sisense, QlikSense, Excel, Google Sheets, Metabase

Libraries : Pandas, NumPy, Seaborn, Matplotlib

Other Tools : Oracle Essbase, Mixpanel

WORK EXPERIENCE

Analytical Engineer | PartnerStack

Aug 2025 - Current

Python | SQL | GCP | Looker | Airflow

- Directed enterprise-wide Looker data governance as the principal LookML code reviewer; architected a scalable semantic layer separating raw views from business-centric Explores to enforce best practices and ensure data consistency for all company-wide self-service
- Optimized Airflow DAG architectures, refactoring transformation logic to reduce runtime by 80% and significantly lowering compute costs across GCP.
- Engineered a scalable dbt modeling layer to migrate legacy Google Sheet reporting into centralized SQL warehouses, reducing manual processing time from hours to minutes.
- Engineered an AI-native data access layer using Model Context Protocol (MCP), tuning LLM capabilities by transforming governed Looker metadata into structured context windows that enable AI agents to securely query internal analytics with 99% precision

Senior Business Intelligence Performance Analyst | Metrolinx

Dec 2024 - Aug 2025

Power BI | Power Apps | Power Automate | Datamarts | Dataflows | SQL | DAX | Power Query | ETL

- Translated complex operational data into actionable insights by presenting Power BI dashboards to 10+ internal teams, reducing executive reporting turnaround from 1 week to 1 day
- Built an Asset Management dashboard with dynamic KPIs and task progress tracking, enabling early identification of delays in project phases
- Developed automated workflows using Power Apps, Power Automate, and Dataflows to streamline data entry and updates across multiple teams
- Leveraged Datamarts and SQL-based transformations to prepare and model data efficiently for use in BI dashboards
- Collaborated with non-technical operational leads to define KPIs and translate business requirements into automated, scalable visualization solutions
- Documented dashboard logic and dataflow structure to improve reproducibility and reduce onboarding time for new analysts by 50%

Data Analyst/Data Engineer | North One

Mar 2024 - Oct 2024

Python | SQL | AWS | Databricks | Redshift | Looker | Mixpanel | Segment | ETL | PySpark

- Developed scalable ELT workflows in Databricks using SQL and PySpark, transforming raw event and user data into structured, analytics-ready tables in Redshift
- Designed and implemented marketing and product data marts to support KPI tracking, feature adoption, funnel performance, and customer segmentation
- Built and maintained Looker dashboards with LookML for CX and Product teams, enabling faster insights into user behavior and campaign performance
- Identified product optimization opportunities that led to a 20% increase in customer approval rates by replacing a legacy fraud model with a more accurate Python-based rules engine in AWS
- Automated Mixpanel and Segment Unify data ingestion workflows, ensuring up-to-date and accurate event tracking across platforms
- Partnered with data engineering and growth teams to define metrics, document transformation logic, and improve data pipeline observability

Customer Data Analyst | Tealbook

Jun 2022 - Jan 2024

Python | SQL | BigQuery | PostgreSQL | Google Cloud Platform | Sisense | ELT | Git

- Conducted in-depth analysis of customer data sets, identifying inconsistencies and ensuring compatibility with Tealbook systems
- Developed and optimized ELT pipelines in BigQuery using SQL and Python, improving data processing efficiency and scalability
- Designed and standardized the “Standard Reporting Package,” reducing report setup time from 1 week to 30 minutes using automated Python scripts
- Led the Accenture onboarding project, automating data enrichment workflows with Python, VBA macros, and GCP, cutting processing time by 50%
- Built validation scripts to detect anomalies and ensure high data quality in enriched customer outputs
- Standardized Git-based version control practices within the team to improve code collaboration, documentation, and onboarding for new analysts

Business Intelligence Analyst | Maximus Canada

Jun 2020 - Jun 2022

SQL | QlikSense | Qlik NPrinting | Excel | Data Modeling | Report Automation

- Automated daily, weekly, and monthly government reporting using QlikSense and Qlik NPrinting, reducing manual workload by 80%
- Led BI support for Elections Canada by analyzing call center survey data and CSAT scores; built automated Qlik dashboards that identified root causes of friction, improving operational efficiency by 30%
- Built and deployed a new data model for the Replicon team, improving data usability and cutting monthly reporting time from 1 week to 1 day
- Collaborated with operations and technical teams to define KPIs and ensure accurate, consistent reporting across teams

Business Analyst | ClicData

Dec 2019 - Mar 2020

SQL | T-SQL | Dashboarding | ETL | Excel

- Created KPI-driven dashboards for clients using ClicData, enabling clear tracking of operational and financial performance metrics
- Collaborated directly with business stakeholders to gather reporting requirements and translate them into visual, actionable insights
- Used SQL and T-SQL to prepare and clean client data for dashboard integration, ensuring accuracy and usability

Business Intelligence Developer | CIBC

Jul 2017 - Nov 2019

PL/SQL | SQL | Tableau | Unix | Shell Scripting | Autosys | Oracle Essbase | ETL

- Developed and optimized PL/SQL procedures for large-scale ETL processes, improving job performance and reducing runtime by up to 80%
- Automated batch data processing using Shell scripting and Autosys to schedule and monitor ETL jobs across financial systems
- Led the migration and integration of CIBC's legacy financial applications to new servers, improving data load times and system reliability
- Supported Oracle Essbase applications for multidimensional financial data, assisting with budgeting and forecasting initiatives
- Collaborated with data engineers and QA to debug production issues and ensure high data integrity across reporting pipelines

EDUCATION

Toronto Metropolitan University - Bachelors of Engineering, Computer Engineering

2012 - 2017
